

INDEX 1977 Nos 72-75

Articles

The assessment of building panels and large building components D B S Berry 75.35

Assessment of hazardous volatiles outgassed from polyurethane foams A Davis, C H W Deane and R W Heighington 72.15

Dealing with the shock environment using shock response spectrum analysis J F Greenfield 74.3

Engine health monitoring in the Royal Air Force A C Cassidy 72.7

Estimating the shock environment encountered during transportation over public roads G E Johnson 72.3

Fatigue life prediction for notched components B J Dabell, S J Hill, D E Eaton, P Watson 75.3

Floating floors — an appraisal P H Allaway 73.3

Fungus testing of materials T Rubidge and I E Austen 74.3

Humidity cycling tests — use or ornament? D Twivey 72.24

Hydraulic oil contamination A T Luto 72.9

Simple predictions of temperature effects on low cycle fatigue lives of some gas turbine alloys G F Harrison 75.13

The testing of large GPR assemblies R J Ryman, K J Russell 75.31

Integration of real suspension elements in an analogue simulation of vertical vehicle vibrations M Lenke, C Voy and K Garavy 74.21

Re-charge or re-activate G Hooper 74.32

The role of the independent test laboratory B A Mair 72.29

Skypak — a case study in packaging development M Copland 73.26

Some research problems on the fatigue of aircraft structures W T Kirkby 73.7

Structural implications of good sound insulation A Burd 74.27

Berry D B S The assessment of building panels and large building components 75.35

Burd A Structural implications of good sound insulation 74.27

Cassidy A C Engine health monitoring in the Royal Air Force 72.7

Copland M Skypak — a case study in packaging development 73.26

Dabell B J (and S J Hill, D E Eaton and P Watson) Fatigue life prediction for notched components 75.3

Davis A (and C H W Deane and R W Heighington) Assessment of hazardous volatiles outgassed from polyurethane foams 72.15

Deane C H W (and A Davis and R W Heighington) Assessment of hazardous volatiles outgassed from polyurethane foams 72.15

Eaton D E (and B J Dabell, S J Hill and P Watson) Fatigue life prediction for notched components 75.3

Garavy K (and M Lemke and C Voy) Integration of real suspension elements in an analogue simulation of vertical vehicle vibrations 74.21

Greenfield J F Dealing with the shock environment using shock response spectrum analysis 74.3

Harrison G F Simple predictions of temperature effects on low cycle fatigue lives of some gas turbine alloys 75.13

Heighington R W (and A Davis and C H W Deane) Assessment of hazardous volatiles outgassed from polyurethane foams 72.15

Hill S J (and B J Dabell, D E Eaton and P Watson) Fatigue life prediction for notched components 75.3

Hooper G Re-charge or re-activate 74.32

Johnson G E Estimating the shock environment encountered during transportation over public roads 72.3

Kirkby W T Some research problems on the fatigue of aircraft structures 73.7

Lemke M (and C Voy and K Garavy) Integration of real suspension elements in an analogue simulation of vertical vehicle vibrations 74.21

Luto A T Hydraulic oil contamination 72.9

Mair B A The role of the independent test laboratory 72.29

Rubidge T (and I E Austen) Fungus testing of materials 74.3

Russell K J (and R J Ryman) The testing of large GPR assemblies 75.31

Ryman R J (and K J Russell) The testing of large GPR assemblies 75.31

Twivey D Humidity cycling tests — use or ornament? 72.24

Voy C (and M Lemke and K Garavy) Integration of real suspension elements in an analogue simulation of vertical vehicle vibrations 74.21

Watson P (and B J Dabell, S J Hill and D E Eaton) Fatigue life prediction for notched components 75.3

Books

Dimensionless parameters: theory and methodology H A Becker 73.18

Display systems for production engineers and managers Published by the Institution of Production Engineers 74.19

Energy from bioconversion of waste materials 1977 D J de Renzo 74.19

How to remove pollutants and toxic materials from air and water M Sittig 74.19

Noise control in industry Edited by D Webb 73.18

Noise evaluation tables in digitalized form J P Seller 74.19

Recommended salary levels for professional engineers Published by the UK Association of Professional Engineers (UKAPE) 73.18

Structure and properties of engineering materials B Harris and A R Bunsell 74.19

Features

The Admiralty underwater weapons establishment, Portland 73.19

'Fatigue of fibre reinforced plastics composites'. SEE One-Day Symposium 73.17

Fitness for use — SEE President's Evening, 8 December 1976 72.7

SEE 1977 Annual General Meeting 73.16

SEE Winter Programme 1977-78 74.19

SEECO 77 — 'Signal processing for vibration, shock and noise' 72.19 73.28

SEECO 78 'Applications of Computers in Fatigue' 75.23

Authors

Allaway P H *Floating floors — an appraisal* 73.3

Austen I E (and T Rubidge) *Fungus testing of materials* 74.3

Berry D B S *The assessment of building panels and large building components* 75.35

Burd A *Structural implications of good sound insulation* 74.27

Cassidy A C *Engine health monitoring in the Royal Air Force* 72.7

Copland M *Skypak — a case study in packaging development* 73.26

Dabell B J (and S J Hill, D E Eaton and P Watson) *Fatigue life prediction for notched components* 75.3

Davis A (and C H W Deane and R W Heighington) *Assessment of hazardous volatiles outgassed from polyurethane foams* 72.15

Deane C H W (and A Davis and R W Heighington) *Assessment of hazardous volatiles outgassed from polyurethane foams* 72.15

Eaton D E (and B J Dabell, S J Hill and P Watson) *Fatigue life prediction for notched components* 75.3

Garavy K (and M Lemke and C Voy) *Integration of real suspension elements in an analogue simulation of vertical vehicle vibrations* 74.21

Greenfield J F *Dealing with the shock environment using shock response spectrum analysis* 74.3

Harrison G F *Simple predictions of temperature effects on low cycle fatigue lives of some gas turbine alloys* 75.13

Heighington R W (and A Davis and C H W Deane) *Assessment of hazardous volatiles outgassed from polyurethane foams* 72.15

Hill S J (and B J Dabell, D E Eaton and P Watson) *Fatigue life prediction for notched components* 75.3

Hooper G *Re-charge or re-activate* 74.32

Johnson G E *Estimating the shock environment encountered during transportation over public roads* 72.3

Kirkby W T *Some research problems on the fatigue of aircraft structures* 73.7

Lemke M (and C Voy and K Garavy) *Integration of real suspension elements in an analogue simulation of vertical vehicle vibrations* 74.21

Luto A T *Hydraulic oil contamination* 72.9

Mair B A *The role of the independent test laboratory* 72.29

Rubidge T (and I E Austen) *Fungus testing of materials* 74.3
